

Failure is not an option

Managed File Transfer is mission critical

Data drives critical decisions and operations. Reliability, security and availability are crucial. That's why innovative enterprises are seeking more effective ways of transferring information. The future is safe, secure Managed File Transfer (MFT).

File transfer fuels system integration

55% of all system to system integration is accomplished via file transfer

Bottom line: When files transfers fail, processes fail.

FTP is an expensive option

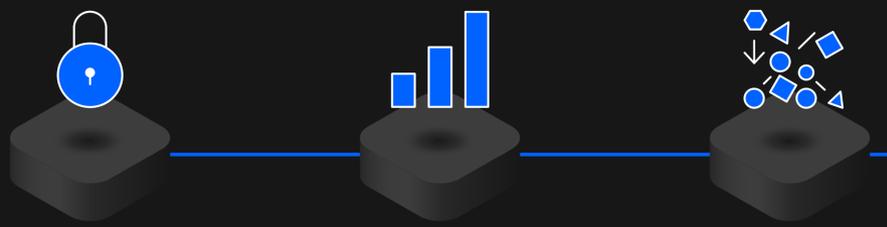

7%
Average percentage of FTP transfers that fail

31 min
Average time it takes to troubleshoot and resolve an FTP transfer error

3.5
Hours of time wasted per 100 transfers

Bottom line: Resolution of file transfer failure is costly.

Top 3 reasons IT leaders give for choosing MFT over FTP

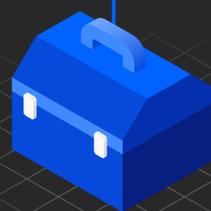

63%
Security

42%
Growth in file volume and size

48%
Complexity of B2B transfers

Bottom line: Jettison FTP or risk business process failure.

When FTP fails, your organization is grounded. Learn how IBM MFT provides security, reliability and governance of your critical file transfers.
